

Adaptive Storage™
Integrated CDN Storage
Solutions with Enhanced
Performance & Lower Costs

HIGHWINDS®
WWW.HIGHWINDS.COM

Adaptive Storage™

Highwinds Adaptive Storage™ is a cloud of globally-distributed nodes with flexible storage capabilities, optimized to function seamlessly with Highwinds' global CDN. Like never before, content owners and distributors can store assets at different levels, and adapt to the demand for content... maximizing price and performance.

Adaptive Storage Features

Origin Storage

- Self-provision origin storage
- No need to split content across multiple libraries due to size restrictions
- Set-up and management tools available in StrikeTracker 2

Mid-Tier Caching

- Deeply integrated with the CDN edge cache
- Maintain different retention policies at each layer of the system
- Policy provisioning in StrikeTracker 2 with as little as one click

File Uploads

- FTP, API and StrikeTracker 2 file upload and management

Cost

- More cost effective than Amazon S3 and other cloud storage providers
- Built from high quality, enterprise capable storage components with proprietary storage management software to support a more cost effective solution

Regional Replication

- Upload content to one or more zones
- Automatically replicated to multiple data centers within each zone

**We Provide You With
The Tools To Create Your
Own "Super Network"**

RELIABILITY

Has an SLA - enforcement

Content is stored with
guaranteed 99.99% durability,
99.99% availability

No single points of failure

Multiple ingest regions available,
all of which span multiple
storage zones

Storage zones include US East
Coast, US West Coast, South
America and Europe

Each storage zone has a
minimum of 2 geographically
separate storage POPs

Adaptive Storage Features (continued)

Redundancy and Durability

- Multiple storage PoPs in each storage zone
- Software tuned to maintain multiple copies per storage zone in geographically separate areas

Scalability

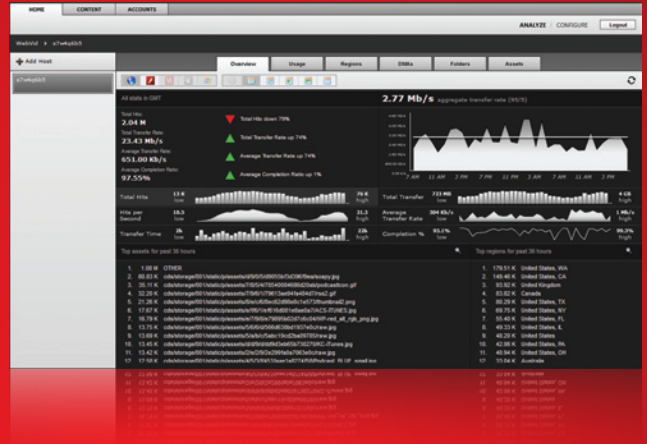

- Deployed at CDN scale, globally
- All storage directly attached to Highwinds' massive backbone

Accessibility

- Immediately purge, move and rename files
- Automatic synchronization of edge cache
- Directly connected to Highwinds CDN
- Custom ingest solutions available
- Metro fiber, direct connects, etc. to optimize ingest path for large libraries

Ease Of Use

- Accessible via open APIs
- Self-service, real-time provisioning via award winning StrikeTracker 2 console
- Full support for FTP, including secure ingest

StrikeTracker[®] 2

The Leading CDN Management & Reporting Console On The Market

Use StrikeTracker 2 to Manage Your Storage Solutions:

- Self-service, real-time storage policy provisioning
- Easy to use set-up and management tools
- Upload files from within the console

**Optimized to
Function Seamlessly
with Highwinds'
Global CDN**
